

Revel Selects EvGateway To Provide Software for Its Fast Charging Superhubs and All-Electric Rideshare Service in New York City

June 8, 2021

EvGateway will provide the software management solution for Revel's Tritium-provided fast chargers, including network, monitoring, and support.

[New York, New York, June 8, 2021] — Electric mobility company Revel, which recently announced plans to launch an all-electric rideshare service in New York City and has also announced plans to build out a network of universal EV fast-charging Superhubs across NYC, has selected EvGateway as its charging software provider.

Revel's rideshare service is expected to launch in Manhattan with an initial fleet of 50 Revel-blue Teslas, and its first Superhub, located in Brooklyn, will open to the public this month. This first Superhub will be the largest universal public fast charging station in the Americas, with 25 Tritium-provided RTM75 DC fast chargers. These public chargers will be available 24/7 and are the first RTM75 units to be installed in the United States. EvGateway will monitor, manage, and offer 24/7 support services as part of their network solution.

"Revel is excited to build out our Superhub network and launch our all-electric rideshare service in NYC with the help of industry-leading partners like EvGateway and Tritium. Together, we're working to transform the urban fast charging landscape and make it a no-brainer to go electric," said Revel COO and Co-Founder Paul Suhey.

"Revel's DC fast charging Superhub, in partnership with EvGateway and Tritium, is a groundbreaking initiative for New York City and the nation," said Tritium President of the Americas Mike Calise. "With Tritium's RTM75 chargers, Revel deployed a modular and scalable charging solution to meet growing EV demand while electrifying the city's rideshare and e-mobility options."

Revel's Superhubs will help accelerate the electrification of New York City, a mission that EvGateway will help facilitate by offering user friendly solutions for both commercial and fleet charging.

"The EvGateway software can be customized for every client and charging requirement. To help facilitate the expansion of EV infrastructure, EvGateway offers solutions for any charging scenario (commercial, fleet, private, residential, employee, hotel, utility, parking lots, etc.) Revel's mission of advancing electrification closely aligns with EvGateway's philosophy of helping to shape a zero-emissions future," said EvGateway President, Reddy Marri.

About Revel

Revel is a Brooklyn-born transportation company that's electrifying cities through charging infrastructure and shared electric vehicle fleets. Through the Revel app, users can rent electric mopeds, sign up for monthly eBike subscriptions, hail an electric car ride or find fast-charging stations compatible with any brand of EV. Revel prides itself on its total rejection of the gig economy and its collaborative approach with local governments. Founded in 2018, the company now operates in four New York City boroughs, Washington, D.C., Miami, Florida, and the California Bay Area cities of Oakland, Berkeley and San Francisco. About Tritium

Founded in 2001, Tritium designs and manufactures proprietary hardware and software to create advanced and reliable DC fast chargers for electric vehicles. Tritium's compact and robust chargers are designed to look great on Main Street and thrive in harsh conditions, through technology engineered to be easy to install, own, and use. Tritium is focused on continuous innovation in support of our customers around the world.

As announced on May 26, 2021, Tritium has entered into a definitive agreement for a business combination with Decarbonization Plus Acquisition Corporation II (NASDAQ: DCRN, DCRNW), a publicly traded special purpose acquisition company (SPAC), that would result in Tritium becoming a publicly listed company. Completion of the proposed transaction is subject to customary closing conditions and is expected to occur in the fourth quarter of 2021.
